

# TRANGOMANAGER

Geological Project Data Management & Delivery

## Knowledge is power...

Trango Geo Manager captures and processes technical records related to geological projects and areas. The application enables users to capture all geographical location information as well as both physical and information item metadata. The application tracks the circulation of items, allowing users to view items through various Trango Connector applications, which exist in Trango Geo Manager and map where the items exist spatially.

## Extensive data model

Tracks an unlimited number of projects, sub-projects, areas and overlaps, project and area aliases, plus...parameters at the project level, items, business associates and more.

## Advanced search capabilities

Perform customized searches based on virtually any criteria in the database, build your own SQL, even merge and save your search results.

## Flexible presentation & reporting

Once the target data is located, users can report directly from any grid, perform calculations-on-the-fly or choose to export directly to Microsoft Excel.

## Integrated GIS mapping

Allows users to perform a variety of geographic-based search, retrieval and display activities.

## Powerful data cleanup tools

Keeping the database clean and in shape is critical to maintaining efficient

and accurate data management practices. Trango's data cleanup tools can help with a variety of special functions designed to keep your data in shape.

## Workflow support

With Trango Geo Manager, you can mark up data assets from your search results for acquisition or physical retrieval. You can create work orders to action your requests, then follow-up on the status of outstanding orders. Trango Geo Manager can handle the details while you concentrate on your strategic, financial and operational objectives.

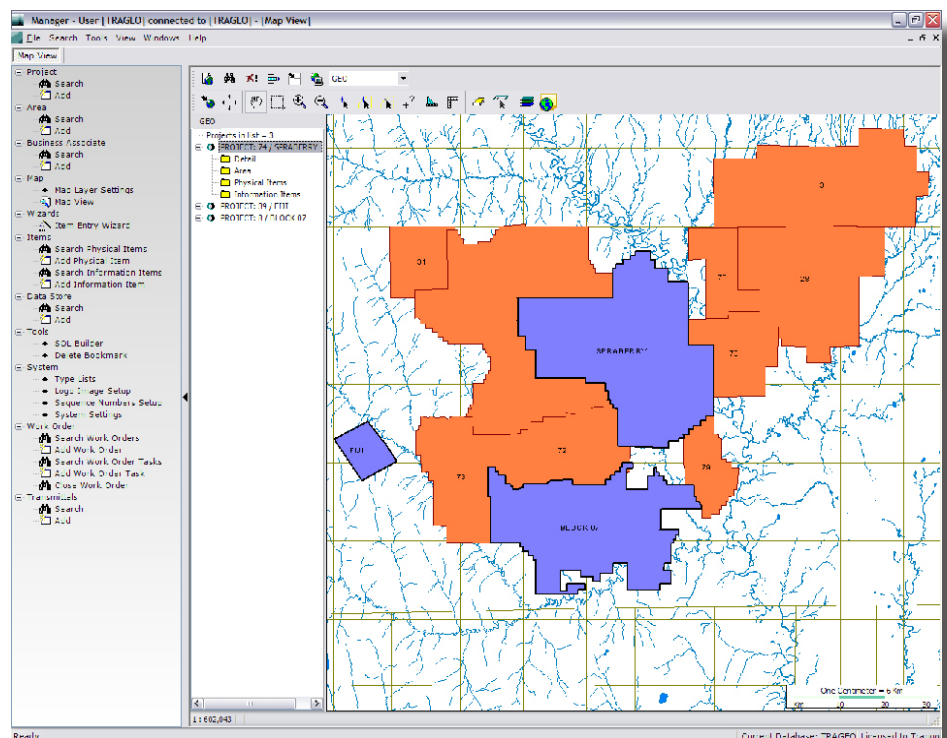

## BENEFITS

**Provides a single solution for managing digital and physical project, area and geological report data assets, regardless of location**

**Increases process performance, reduces cycle times and improves productivity**

**Reduces risk of data loss and helps avoid expenditures to re-purchase geological project data the company already owns**

**Increases end-user confidence in the data**
