

# Iraq 4th Licensing Round

High Specification Data Management

## Global Presence with Local Understanding

Fugro is a global leader in data conditioning and has more than 20 years of expertise and experience in all aspects of the discipline: Performing rapid seismic vectorising, processing, map digitising, well-log digitising, compositing and formation description logs to the highest technical standards.

Customers often have just one chance to retrieve vital data from vintage media. Fugro has a vast range of data improvement tools and expertise at its disposal, and, by drawing on its global network, can perform data improvement services on all historical media types.

### Fugro Services Include:

- Seismic Vectorising
- Seismic Processing
- Merging Datasets of Differing Vintages
- Seismic Mis-tie Analysis and Correction
- Creation of Pseudo 3D Seismic
- Map Digitising
- Log Digitising & Compositing
- Formation Description Logs (FDL)

## Extensive Iraqi Data Experience

With extensive experience in licence round data management, and having assisted large Oil and Gas organisations throughout the three previous Iraq licence rounds Fugro has always been set apart from its competitors by working with client's specific requests and tailoring data to fit the client's need.

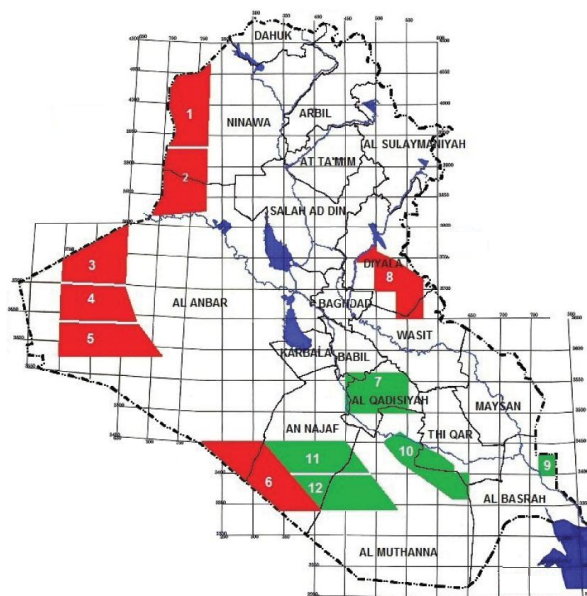

This approach to data improvement defines Fugro as a complete data management solution.

### Data will be delivered in a workstation ready format:

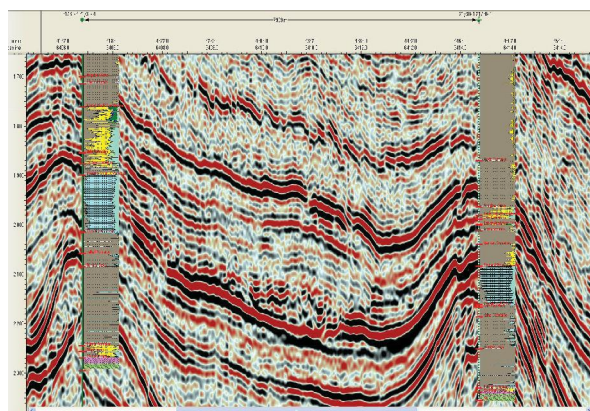

- Vectorised and processed SEG-Y data integrated with navigation
- Digitised and processed well data
