

## Physical Asset Management

**Fugro Data Solutions is an international company focusing on all aspects of Data Management. The company's solutions span intelligent storage, innovative data and technology products, data management, as well as a broad range of consulting services that enable customers to optimise their technical and business decision processes.**

Fugro Data Solutions is part of the Fugro group, an international geotechnical, survey and geoscience service provider with over 13,000 staff stationed in over 50 countries.

The Physical Asset Management Group's mission is to provide "Intelligent Storage" services, a blended mix of physical organisation, storage of data (physical samples, physical documents, documents on electronic media, digital data), cataloguing, scanning, transcription, retrievals and withdrawals to achieve:

### Reduction in Storage Volumes by

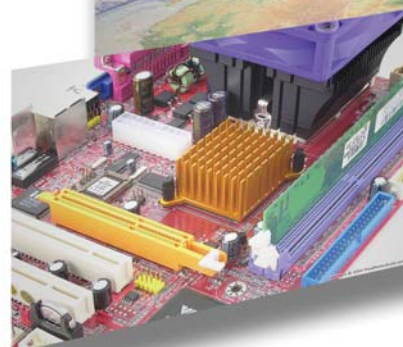

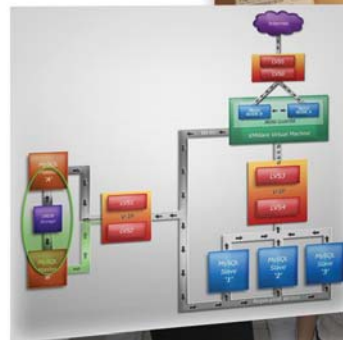

- Duplicate elimination
- Data sorting
- Repacking
- Scanning
- Secure destruction

### Reduction in Physical Data Management Costs by

- Fixed cost approach
- Scan-on-demand instead of physical retrieval
- Reduced volume

### Profitability Improvements by

- Increased user access to data
- Increased utilisation of physical assets
- Up-to-date catalogues
- No further missing/multiple copies of data
- Electronic data rooms and data brokerage

## Intelligent Storage Worldwide

Experienced Fugro personnel manage data for clients from over 40 dedicated storage units in the US (Houston), Canada (Calgary), UK (London, Aberdeen, North Wales) and Holland (Leidschendam). All units are provided with the highest standards of physical security, digital security, and fire prevention, temperature and humidity control.

Data catalogues, ordering, scan-on-demand are pro-actively managed using Fugro's cutting edge, web-based physical asset management software.

A full suite of associated data conditioning services is available, providing a true one - stop physical asset management service. The website also automatically records statistics of registered users, road show attendees and usage of the online data viewing facility.

### Associated services include;

- Viewing rooms
- Cataloguing / inventory management
- Retrievals and deliveries
- Reproduction and copying
- Supply of materials
- Computer centre services
- Data investigation
- Data retention
- Data loading
- Reproduction
- Digitising
- Plotting
- Tape transcription
- Disaster recovery
- Legislation compliance
- Off-site data vaulting
